Feaster

Nucleus Hydrodelineator

Two irrigating ports for fluid distribution in both the planes
Closed wedge shaped tip allows easy penetration between nucleus & epinucleus

- OP-TG-286 25Ga x 22mm

Blumenthal

Tapered Hydrodelineator

Tapered tip allows more flow of fluid through a smaller tip.
Easy insertion under capsule for hydrodissection or into nucleus for hydrodelineation.

- Lightweight titanium handle reduces hand fatigue while providing lasting durability.
- Squeeze style handle provides extremely smooth actuation for high precision surgical maneuver.
- Rounded grip area enables easy 360° rotation during use for optimal positioning of tip. Forceps and scissors have stationary dist tips to eliminate any unintended movement of the jaws during actuation.
- A wide variety of instrument tips are available to meet every surgical need. Tips are made from stainless steel which is highly corrosion resistant, resulting in smoother operation and fewer repairs.
